Write a program in Django to print dictionary name student which has name , contact ,address, as a key in for of table in template.

Arman   0211csds026 / 2101331540063

<div align="center">views.py</div>

```python
from django.shortcuts import render
from django.http import HttpResponse

def HomePage(request):
    data={
        'title':"Student record",
        'lect': ["java",'php','python'],
    }
    return render(request,"index.html",data)

def printData(request):
    return HttpResponse(request,'index.html',{'name':'Arman'})
```

<div align="center">urls.py</div>

```python
from django.contrib import admin
from django.urls import path
from . import veiws
urlpatterns = [
    path('admin/', admin.site.urls),
    path('data/',views.HomePage)
]
```

<div align="center">Index.html</div>

```html
<html>
    <head>
        <title>this is title </title>

        <style>
            .student{
                color: rgb(201, 36, 130);
                background-color: blanchedalmond ;

            }
        </style>
    </head>

    <body>
        <div class="student">{{title}}</div>
    </body>
```

```html
</html>
```

Header.html

```html
<html>
    <body background="blue">

</body>
{%block content %}
{% endblock %}
</html>
```
